PROFILE

AI Engineer with production experience deploying medical imaging models and building LLM-based RAG pipelines in clinical environments. Built and shipped a funded glaucoma detection AI (₹10L seed, recognised nationally). Hands-on with security monitoring pipelines using Wazuh SIEM, FastAPI backends, and PostgreSQL data systems. Open to remote, hybrid, or relocation.

EXPERIENCE

AI Engineer | Dobbe AI

Aug 2025 - Present | Remote

- Built security monitoring pipeline using Wazuh SIEM - wrote custom decoders, detection rules, and alerting workflows to identify system failures and abnormal behaviour in real time.
- Reverse-engineered proprietary medical file formats to extract metadata and prevent data integrity issues before database ingestion.
- Developed backend APIs to preprocess medical images, map metadata correctly, and store validated data in PostgreSQL.
- Migrated production application from .NET 9.0 to .NET 4.8 to ensure compatibility across 32-bit and 64-bit Windows environments including legacy Windows 7 clients.

AI Engineer | Medical Imaging R&D

Oct 2025 - Mar 2026 | Remote

- Built AI-assisted cervical cancer auto-contouring system for radiotherapy planning - 3D U-Net for tumour segmentation, MedGemma for clinical report generation, RAG pipeline with Llama 8B for guideline retrieval, and MedSAM for contour refinement.

AI Engineer & Co-Founder | GlucoTrack Private Limited

Sep 2023 - Aug 2025 | Remote / Hybrid

- Designed glaucoma detection pipeline using YOLOv11 for optic disc and cup segmentation, U-Net for vertical diameter extraction, and cup-to-disc ratio analysis with ML classification incorporating patient demographics
- Optimised model inference for low-latency clinical use - enabling real-time screening without lab infrastructure.
- Secured ₹10L+ seed funding (Titan Design Impact Challenge, Top 10 nationally) and won Startup Mania 9.0 representing the product across national and regional innovation challenges.

SKILLS

AI & Machine Learning

Python | Computer Vision | Deep Learning | RAG | Vector Embeddings | FAISS | LLaVA-Med | MedGemma | MedSAM | YOLOv11 | U-Net

Data & Systems Engineering

PostgreSQL | SQL | Data Pipelines | FastAPI | REST APIs | Data Integrity & Validation

Monitoring & Reliability

Wazuh SIEM | Custom Decoders & Rules | System Logging | Alerting & Dashboards | Error Monitoring

Frameworks & Tools

FastAPI | Flask | C# | .NET Framework | Git | Linux | Docker

ACHIEVEMENTS

GLAUCOMA DETECTION AI

- Titan Design Impact Challenge - Secured ₹10L seed funding, recognised Top 10 nationally among medical AI startups
- Startup Mania 9.0 - 1st Prize, regional startup competition

ADDITIONAL INFORMATION

- Languages:** English, Tamil
- Work Preference:** Open to Remote / Hybrid / Relocation

EDUCATION

KONGU ENGINEERING COLLEGE | 2022 - 2026

B.Tech in Artificial Intelligence and Machine Learning
